

BLINKBUN

WHITEPAPER v1.2

Product-first Solana game, community and BBUN operating model · English

Token	BBUN
Network	Solana Mainnet
Total / Fixed Supply	1,000,000,000 BBUN
DEX	LIVE - Raydium CPMM BBUN/USDC
Season Reward Claim	Opens after season close, final settlement and distribution preparation

Current public status

The official Mainnet Mint

6K8ZxubknZy4mDCrHsNtTt1kx5qDz1N4DGXsahkxNENh

has a permanently fixed supply of 1,000,000,000 BBUN. Allocation, Mint/Freeze Authority removal and long-term Founder vesting are complete. The official Raydium CPMM BBUN/USDC market is LIVE and the initial LP is permanently locked through Burn & Earn. Season reward distribution is separate from DEX trading and follows season close, final settlement and distribution preparation.

1. Executive Summary

BLINKBUN uses a product-first model rather than placing token sales ahead of product usage. Users can play for free and earn BP. BP and BBUN are not the same asset and there is no fixed conversion rate. BBUN is a fixed-supply Solana Mainnet token while BLINKBUN focuses on real gameplay, holder utility, season operations and observable market data.

Core principles

- Validate the game and real user activity first.
- BP is an off-chain game point and is not converted to BBUN at a fixed rate.
- The 1,000,000,000 BBUN total supply cannot be increased because Mint Authority has been removed.
- BLINKBUN does not use fake holders, wash trading or artificial volume as a growth strategy.
- No token price, return or exchange listing is guaranteed.

2. Supply & Allocation

Allocation	Share	Amount	Purpose
Community	30%	300M	Season and community rewards
Liquidity	20%	200M	Market liquidity reserve
Ecosystem	15%	150M	Product and partner expansion
Founder	10%	100M	0% launch , 12m cliff + 36m monthly
Marketing	10%	100M	Verifiable growth programs
Treasury	10%	100M	Operations, security and development
Reserve	5%	50M	Future reserve
Team	0%	0	No separate Team allocation

Allocation defines purpose; it does not automatically become circulating supply. Founder, Treasury and other project-controlled balances are managed separately from genuine public float.

3. Founder Vesting & Supply Control

The 100M BBUN Founder allocation uses 0% launch unlock , a 12-month cliff and 36 monthly vesting periods. The vesting contract has no cancellation authority; only the recipient address may be changed. Mint Authority is revoked so additional BBUN cannot be issued, and Freeze Authority is also removed.

4. Game Economy & Season

BP is an off-chain game point earned from check-ins, taps, missions, referrals, rankings and other game activity. BP is not BBUN and BLINKBUN does not guarantee cash redemption or a fixed BP-to-BBUN exchange rate.

- Season 1 fixed Reward Pool: 300,000 BBUN.
- Each season publishes its Reward Pool, minimum duration, Qualified requirements, Eligible BP limits, Fraud Review criteria and allocation rules before settlement.

- Any BBUN estimate shown during a season can change with participation and total Eligible BP and is not a finalized claim amount.
- Season reward distribution is separate from DEX trading and follows season close, final settlement and distribution preparation.

5. DEX & Liquidity

On 2026-09-06, the official Raydium CPMM BBUN/USDC pool launched with 10,000,000 BBUN + 1,000 USDC. The initial reference price was 0.0001 USDC/BBUN. Initial circulation was 10M BBUN (1.0%) with no project-seeded non-LP float, so the launch began 100% LP-backed. The initial LP is permanently locked through Raydium Burn & Earn.

Market risk

Early liquidity is limited, so relatively small orders can create material price impact and slippage. Review the quote, price impact and minimum received before swapping. BLINKBUN does not promise price appreciation or returns.

6. Security & Wallet Verification

- The service is not designed to request Seed Phrases, Private Keys or wallet passwords.
- Public Solana addresses and signature verification are used to prove wallet ownership.
- Controls include CSRF protection, Secure/HttpOnly cookies, rate limits, password hashing, privilege separation and audit logs.
- The operating model keeps Mainnet signing keys off the web server through an external-signer principle.

7. Growth & Market Expansion

BLINKBUN is shifting away from relying only on repeated social posts and toward search acquisition, real gameplay, holder utility, public market data and retention metrics. CEX or data-platform expansion is evaluated only when actual user, trading, liquidity and retention data justify the cost.

Stage	Status / Focus
01 Product	Game loop, BP economy and Public Launch operations
02 Mainnet	1B fixed supply, allocation and authority revocation complete
03 DEX	Raydium CPMM BBUN/USDC LIVE; initial LP permanently locked
04 Season	Usage-based seasons and post-settlement reward distribution
05 Growth	Search acquisition plus user, holder, liquidity and retention data
06 Expansion	Evaluate CoinGecko/CMC/CEX when conditions justify it

8. Risks & Disclosures

- BLINKBUN does not guarantee BBUN price, returns, liquidity, volume or any specific DEX/CEX listing.
- Shallow liquidity can create high volatility, slippage and price impact.
- Solana, wallets, RPCs, DEXs and other third-party infrastructure can fail or contain vulnerabilities.
- Regulatory and tax treatment varies by jurisdiction and can change over time.
- Token names and symbols can be copied; users should verify the official Mint address directly.

9. Document Status

Whitepaper v1.2 - DEX LIVE Edition

As of 2026-09-09. This public edition reflects Mainnet issuance and authority removal, Founder vesting, the Raydium CPMM launch and permanent locking of the initial LP. Season reward distribution is a separate post-settlement step rather than a DEX availability state. The document may be updated as product, market, legal or operating conditions change.
